

How should Goff Creek be restored?

Goff Creek flows through the area mostly in a confined channel or in pipes. It used to support salmon runs and the overall basin is in relatively good condition. In Bel-Red, small natural sections remain and these are intended to be the foundation for restoring a healthy stream.

Great Streams Strategy

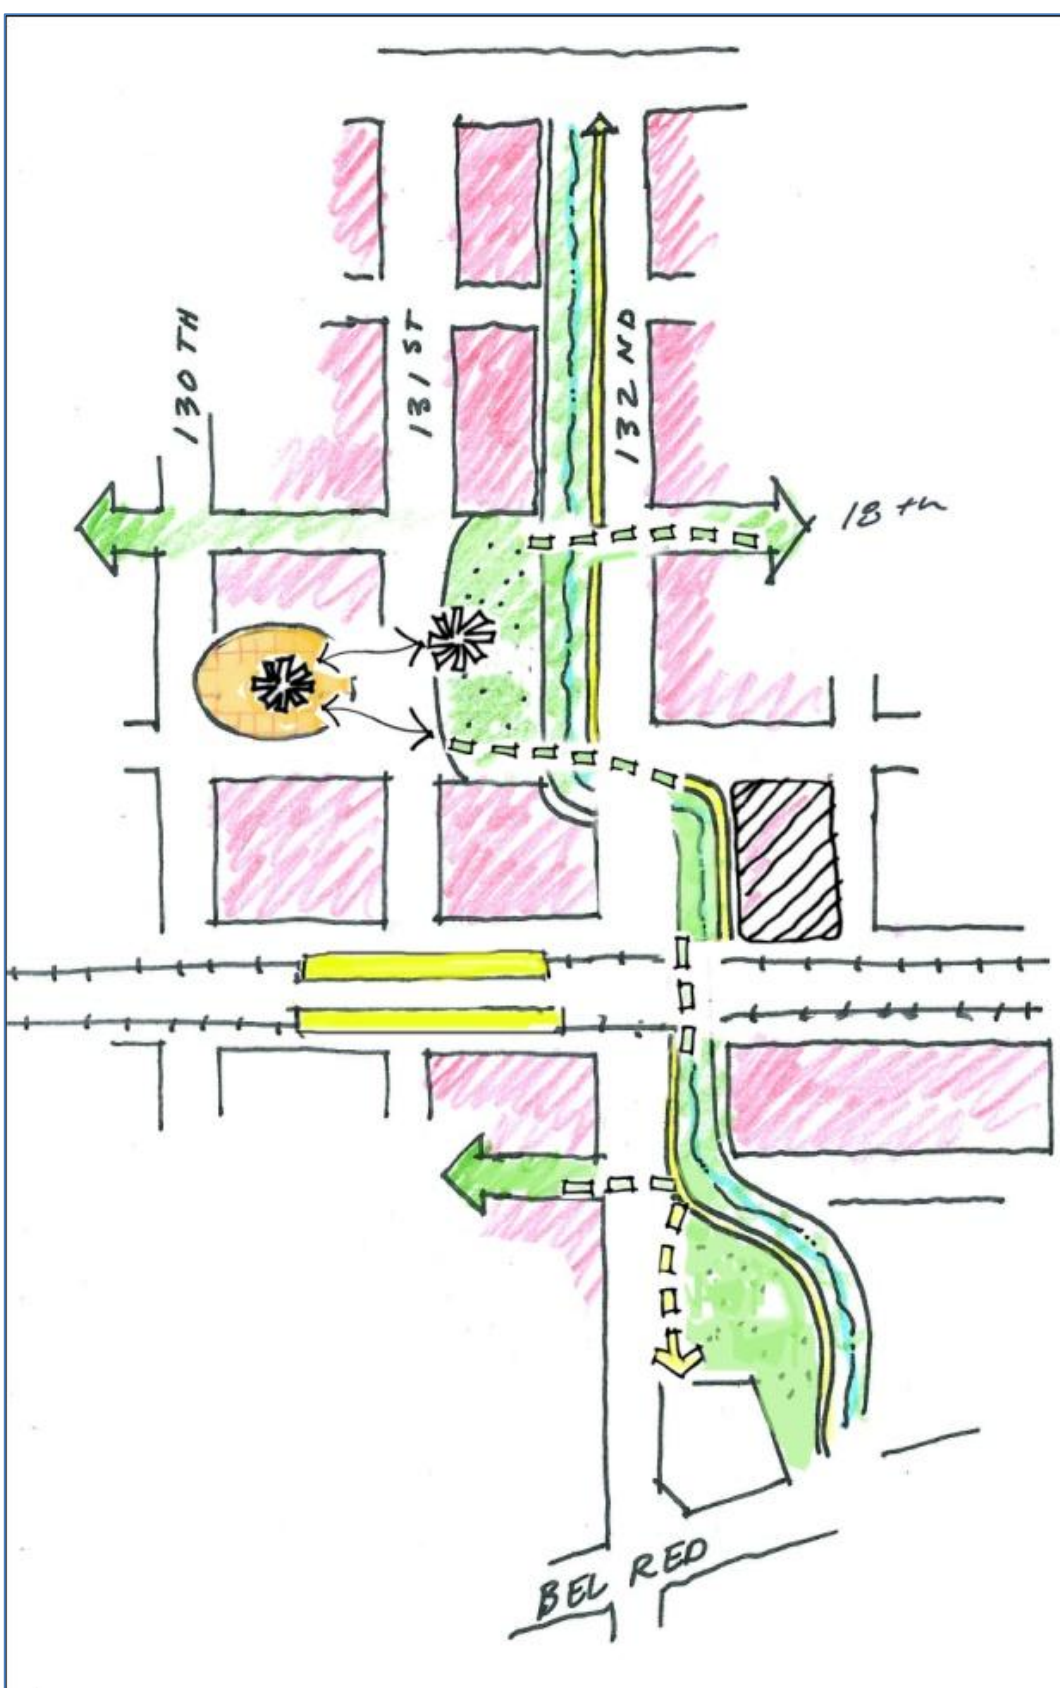

The Bel-Red Great Streams Strategy seek to restore Goff Creek as an ecological amenity for an emerging neighborhood. This will involve “daylighting” piped segments of the stream, providing a 50-foot buffer on each side, and installing fish-passable culverts.

Alternatives

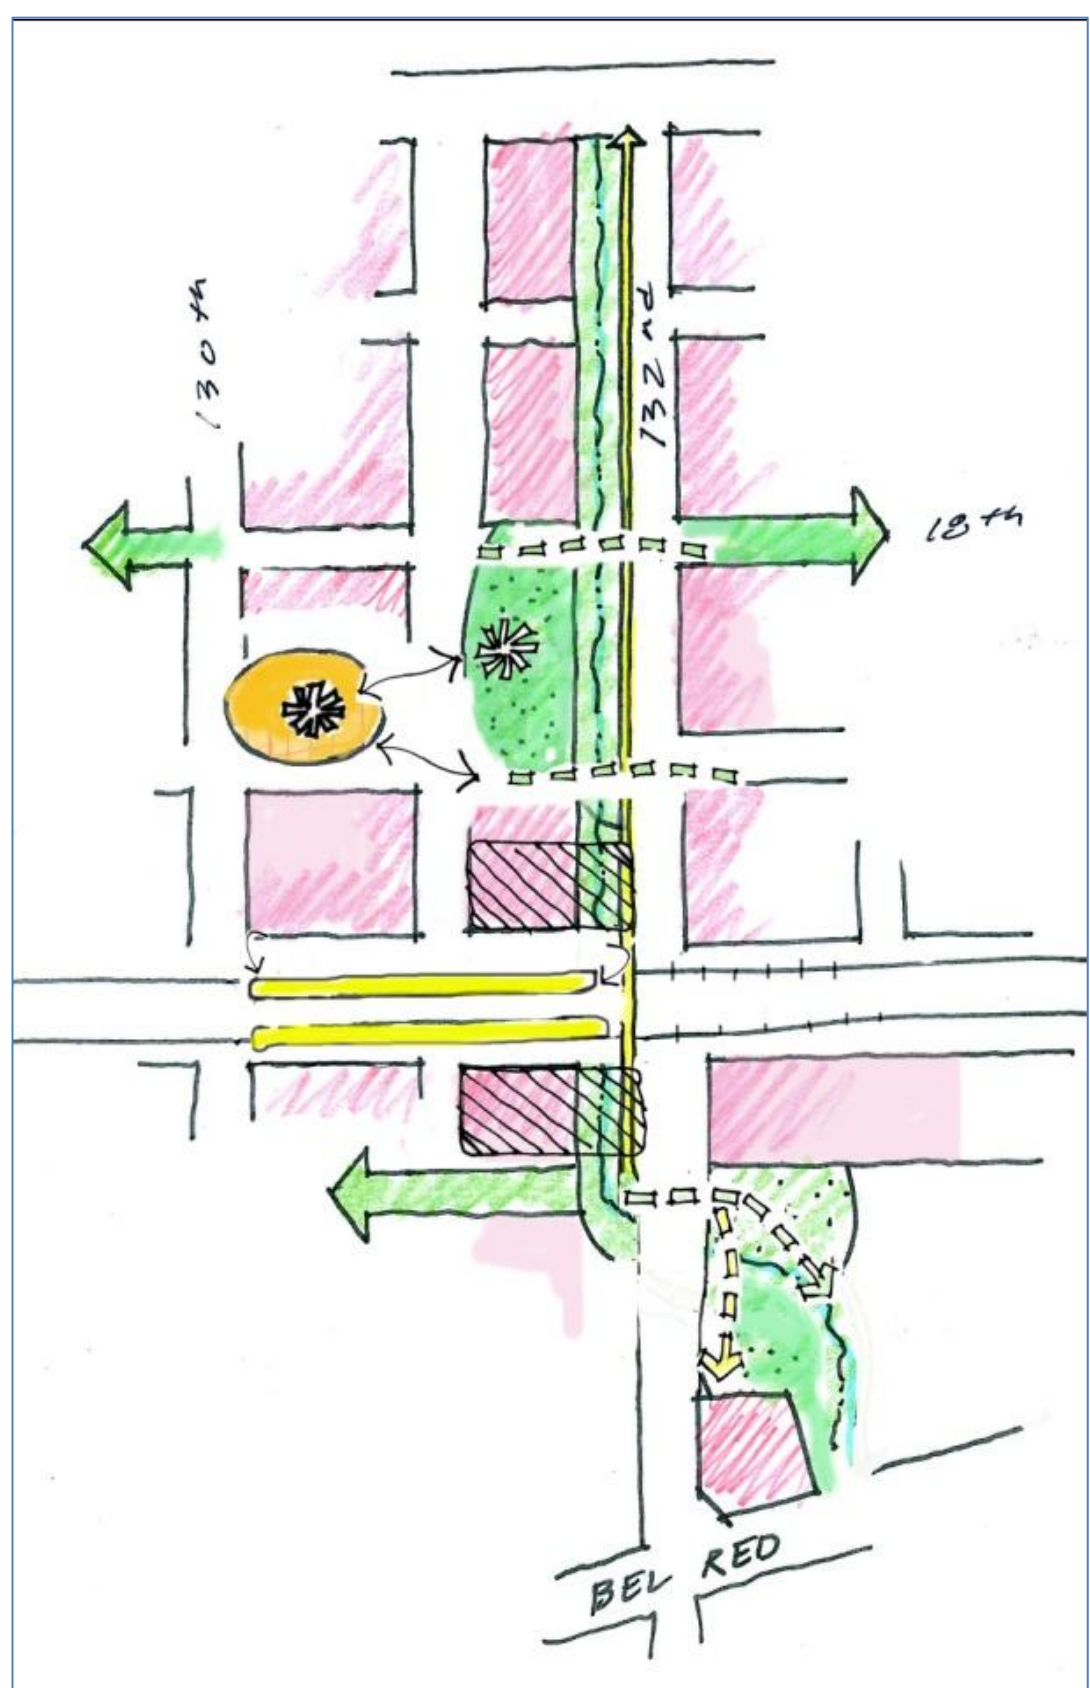

Alternative 1

Stream would flow close to where it is now, with improved buffers and daylighted segments that are now in pipes

Alternative 2

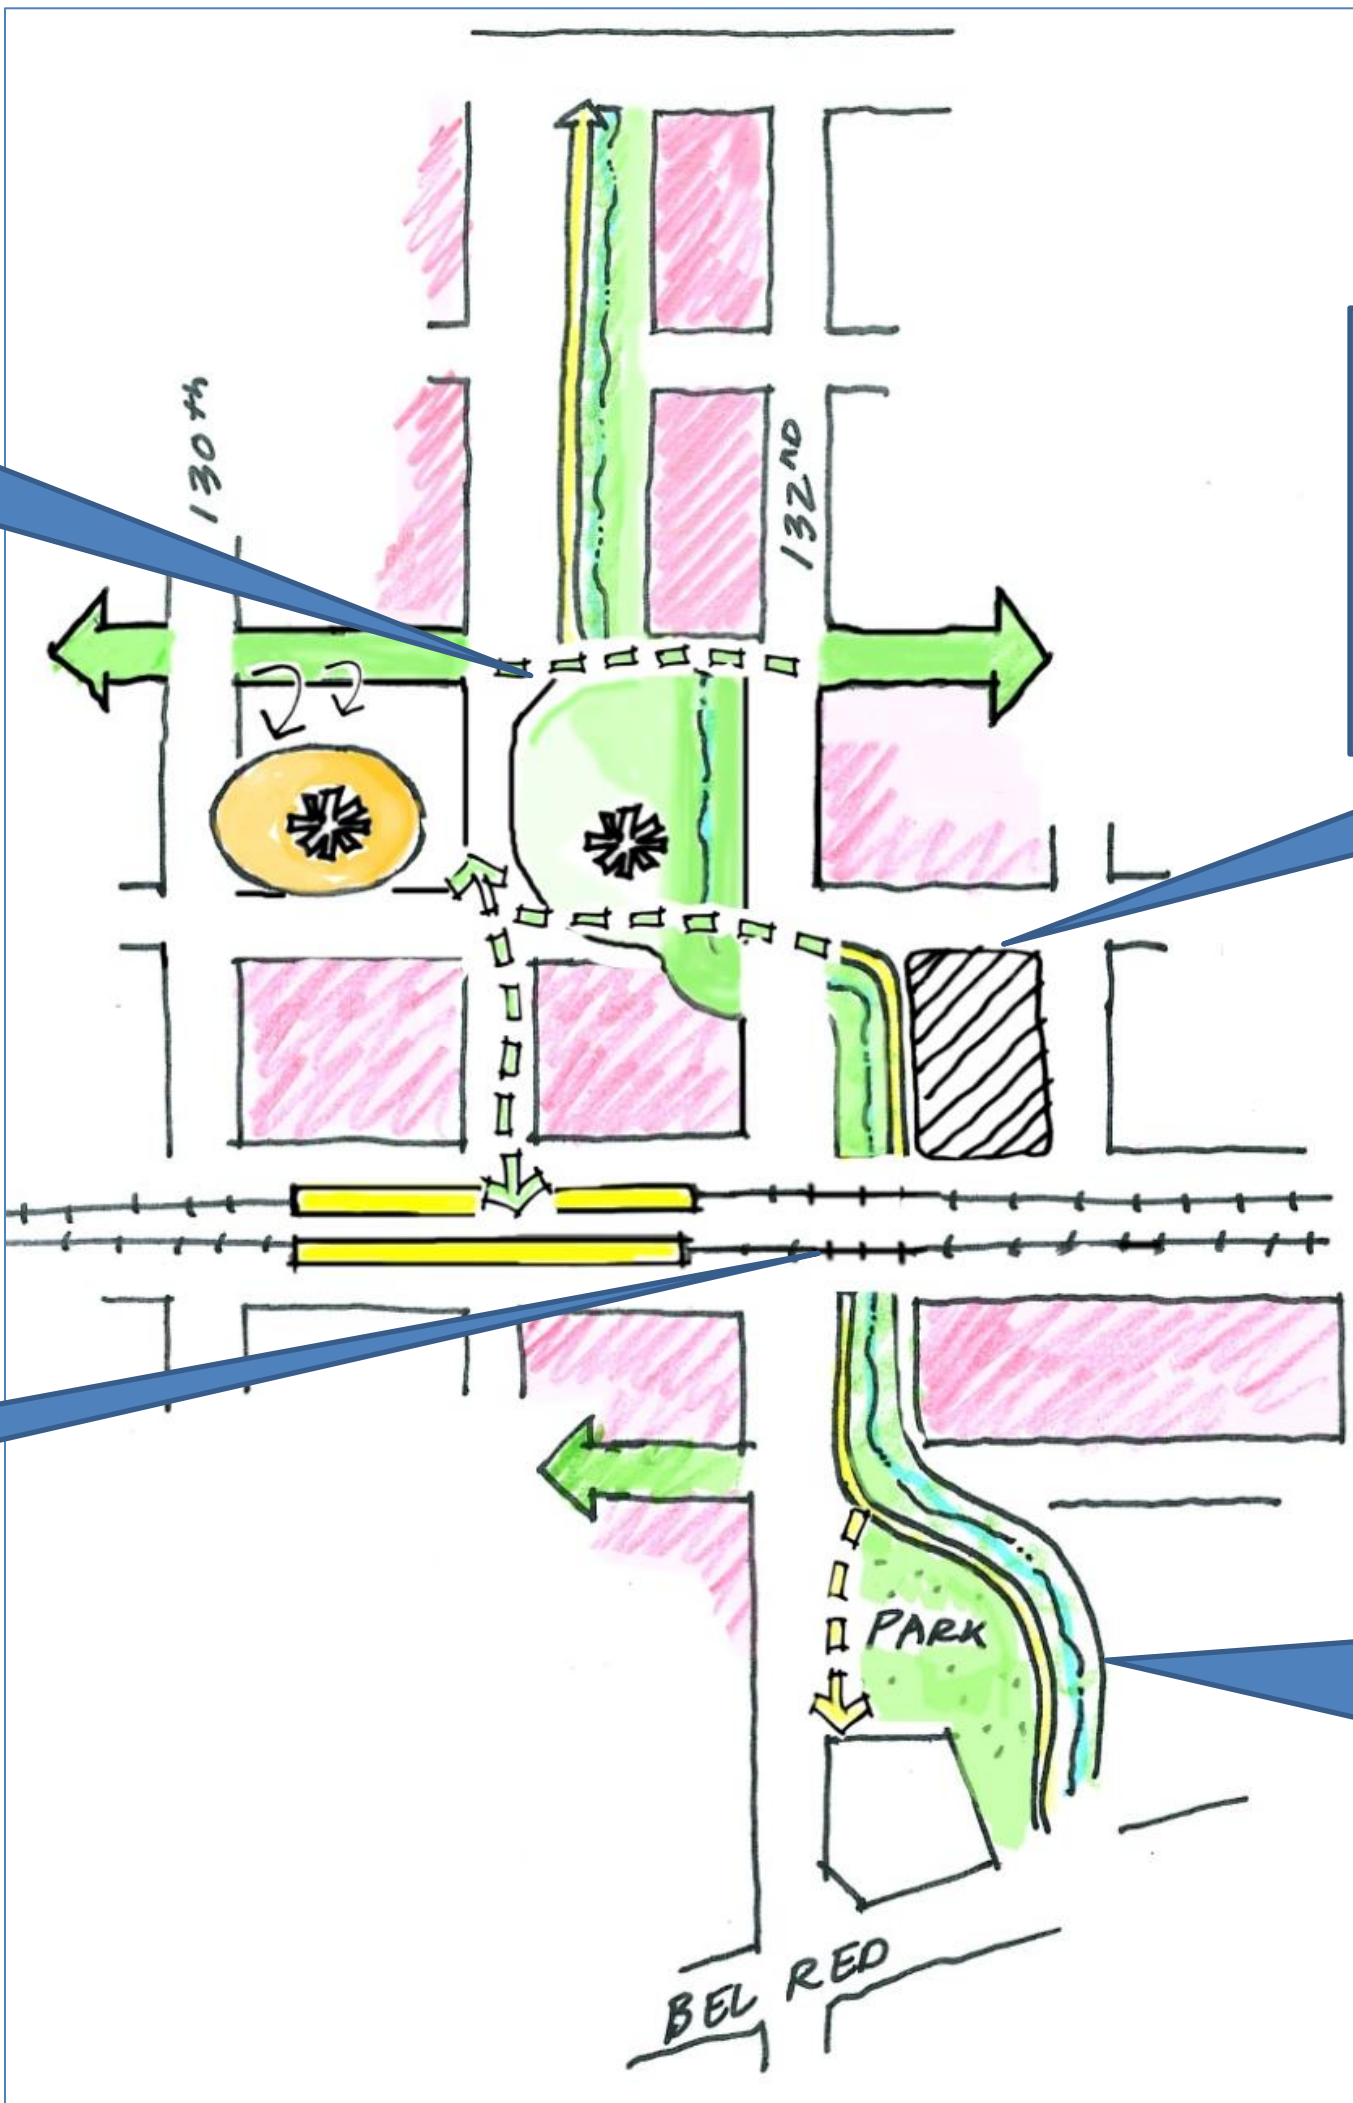

Stream would be moved closer to 132nd Ave NE to create a green corridor

Alternative 3

Stream would be aligned along the west side of 132nd Ave NE, crossing to the east side south of NE 16th Street

Preliminary Preferred Alt.

Integrates creek with new park

Design is compatible with stream hydrology

Fish passable culvert for street and light rail

Provides good redevelopment potential

Integrates creek with new park
